Laptop is going to your hotel and should be there early AM on Tuesday. I missed the pickup time on Friday.

LOGON info:

Username: ertadmin  
Password: N0Cake4you

The 0 is the number zero.

The new software is on a "green" thumbdrive in one of the "pen" slots in the briefcase.

Hi Dave:

If it is to be shipped for delivery Monday or Tuesday, you would have to send to my hotel:

**Holiday Inn Mt. Kisco (Westchester County)**

One Holiday Inn Drive  
Mount Kisco, New York 10549

Please let me know so I can inform the hotel

I can send you a laptop tonight when I get back to CI. I found out one of our contractors took the software out to make a copy and did not put it back in. You shouldn't be having this much trouble. I will be in Atlanta on Monday.

What address should I shop the laptop and software to.

Eric,

I have attached 3 files uploaded to my PC during training. I don't have .cfg file. May be, SN can be extracted from those files.

I've had problem with the charger, first I was able to detect 7.5 v in the output plug, then it went away, I got "zero" on my multimeter.

Oleg.

**Importance:** High

I know as much as you know about the instrument. Right now I am getting my work phone swapped out. This has nothing to do with the adaptor? I have copied both Oleg and David Kappelman. Guys any help

**Subject:** RE: Configuration Utility for RSS-131 HPIC

We have not been able to get the computer and the unit to communicate so that we can complete the initial configuration of the units. At this point even if we run the unit in the field blindly without visual we still do not know what the configuration is.

We cannot tell apart which unit we used for the training, at least we know that unit was configured and can be run blindly. Is there a way to identify the unit serial number from the data Oleg downloaded on his computer?

Eric,

1. Regarding your question on Configuration Utility for RSS-131 HPIC:

You can use it even if unit is not communicating, but only to look at the saved .csv file, look at the graph and configuration as it has been stored on PC.

2. Regarding turning unit on and off between locations: you can do it. What I was describing was how I was doing it without turning it on and off while transporting around the site.

Oleg.
